

Fabrication Services

Some of the shops that I and/or my customers have used for fabrication are listed below. They have in the past supplied quality products with reasonable cost and delivery time. If you are in need of prototypes or pre-production quantities you may wish to contact these vendors.

For larger production runs (e.g. thousands of units/month) I have not been able to locate any credible manufacturers in the United States at this time. My customers have been going to Southeast Asia for providers that meet their needs in this area.

I recommend that customers contact potential fabricators before all drawings are released. The potential fabricator should be given draft drawings on which to base their cost estimate and delivery schedule. Potential fabricators should be encouraged to provide comments as to any changes that can be made to improve the manufacturability of the item.
